

**Ancra International's Hawthorne, CA, web test lab receives certification by  
Association of American Railroads**

HAWTHORNE, CA--Ancra International, an assembler and distributor of textile webbing securement devices, has received AAR certification of its Hawthorne web test lab. The lab successfully demonstrated its capability to perform all necessary requirements in the AAR's qualifying testing process for polyester webbing and web tie-down assemblies.

The facility has been assigned AAR marking, *AAR-74L*, which is distinctive and identifies Ancra's lab certification. The "L" marking indicates the facility is an AAR Approved web test lab. The certification remains in effect through January 2007 and Ancra can reapply for re-certification every three years thereafter.
